# Stuttering sub-group study

This study is investigating subgroups of people who stutter (past or present), based on family history, speech characteristics, personal experience of stuttering, and other health and medical conditions. Identifying subgroups of people who stutter with similar features will help us to better understand differences in stuttering such as why some people resolve naturally and some don't, or why some people respond to speech pathology treatments and others don't.

## We are looking for:

- Individuals aged 5 years and older who have ever stuttered (past or present)

## What is involved?

- Completing online surveys about health and medical history and experience of stuttering (45 minutes)
- An online Zoom session with a speech pathologist to complete speech tasks (45 minutes)

## How do I enrol?

- Scan the QR code →
- Or email us at:
